Dabir Hasan **Rizvi**

Software Engineer | Portfolio: dabirrizvi.co.uk

Location: Sheffield* (willing to relocate) Email: dabir.rizvi@gmail.com Phone: +44 (0) 7737 906374 Links: LinkedIn, GitHub

Professional Summary

Dynamic and results-driven Software Engineer with over two years of experience in agile environments, specialising in web-based application and back-end development using technologies like Node.js and PHP. Proven track record of enhancing user experience and increasing engagement through innovative solutions. Skilled in object-oriented programming with strong expertise in database design and optimisation, including MongoDB and PostgreSQL. Experienced in building robust data pipelines and scalable APIs, with exposure to Apache Kafka for event-driven architecture and real-time data streaming. Adept at collaborating with cross-functional teams to deliver high-quality software solutions. Committed to leveraging technical expertise and proactive problem-solving skills to drive organisational success and innovation.

Skills

Programming Languages:	JavaScript, PHP, Python, Java, R
Back-End & Databases:	Node.js, Express.js, MongoDB, PostgreSQL, Kafka, RESTful APIs, Magento 2, GraphQL
Front-End Technologies	Vue.js, Alpine.js, Tailwind CSS, Bootstrap, Knockout.js
DevOps & Tools	Docker, Git, Jira, Google Cloud Platform (GCP), CI/CD, Agile
Data Science and Machine Learning:	Data Analysis, Feature Engineering, Predictive Modelling
Soft Skills:	Communication, Adaptability, Problem-solving, Teamwork, Time Management

Work Experience

Junior Magento Developer July 2024 – Present
Reach Studios Ltd., Sheffield, United Kingdom

- **Innovative Custom CMS Solutions:** Collaborated closely with stakeholders to gather requirements, present concepts, and deploy custom CMS blocks. Enhanced site performance, usability, and back-end management.
- **B2B Magento Platform Implementation:** Contributed to the development of a scalable B2B Magento solution replacing a legacy SAP system, leveraging custom modules for customer group–based pricing, catalog management, and API-driven workflows.
- **Backend Integration:** Developed custom modules and optimised checkout workflows. Engineered backend services within a microservice architecture, leveraging Kafka for event-driven asynchronous communication and RESTful APIs to enable scalable, decoupled components.
- **Performance & Feature Enhancements:** Worked with Elasticsearch for improved search performance, built custom reusable Magento widgets, implemented GraphQL endpoints, and applied critical security patches to maintain a secure and robust platform.

Junior Web Developer July 2022 – June 2023
Net World Sports, Wrexham, United Kingdom

- **Component-Based Development:** Designed and implemented responsive, reusable Vue.js components within a microservice architecture, integrating with Node.js and Express.js backend services to deliver high-performance, scalable web applications.
- **Increased user engagement:** Revamped the company's blog website, resulting in a 40% increase in user engagement through mobile-first design and content optimisation.
- **Boosted Productivity:** Developed a Chrome Extension that integrated various APIs, leading to a 60% boost in departmental productivity by streamlining workflow.
- Ensured High Code Quality: Conducted code reviews, maintained comprehensive documentation, adhered to best practices, and utilised CI/CD pipelines to automate testing and deployment, ensuring faster and more reliable releases.
- **Migrated E-commerce store:** Employed agile methodology to migrate 40+ ecommerce stores from Magento 1 to Magento 2, resulting in a 30% reduction in page load times, an improved lighthouse score by 15%, and an enhanced customer experience.

Java Programmer (Internship) January 2020 – July 2020
Racks & Rollers | Storage Technologies & Automation, Bengaluru, India

- **Developed Scalable Solutions:** Created a scalable Pick-to-light system GUI, enhancing operational efficiency and user experience.
- **Full Development Lifecycle:** Engaged in the complete software development lifecycle, from performance analysis and design to development and testing, ensuring optimal functionality and user satisfaction.
- **Enhanced Software Quality:** Leveraged Scrum and Test-Driven Development (TDD) methodologies to streamline the development process, ensuring high quality software delivery and reducing bug occurrence by 30%.

Education

MSc. Advanced Computer Science (with Integrated Year in Industry) September 2021 – December 2023
Aberystwyth University, United Kingdom

Bachelor of Engineering in Electronics and Communication Engineering August 2016 – August 2020
CMR Institute of Technology, Bengaluru, India

Personal Projects

Prediction of Parking areas availability from parking dataset using AI/ML Models

- Developed a system using Santander's on-street sensor data and machine learning techniques (LSTM, Random Forest) to forecast parking availability with over 77% accuracy, enhancing urban mobility by providing reliable parking predictions.

Prediction of likelihood of Blood-Brain Barrier (BBB) penetration for a chemical compound

- Secured 1st place in a Kaggle competition by designing an SVM model with 90.603% accuracy to predict the likelihood of chemical compounds penetrating the blood-brain barrier. This model aids in accelerating drug discovery processes.

Detecting Cardiac Arrythmia using single led ECG recordings

- Utilised PhysioNet's dataset to create a model for arrhythmia detection, achieving 82.947% accuracy through random forest and CNN models. This project contributed to improving the efficiency of arrhythmia diagnosis and patient monitoring.

Agile Software Development Project

- Led an agile team as the product owner to develop a website that helps students cook healthy and easy recipes. The site provided nutritional values based on ingredients and allowed users to create and publish their own recipes. This project improved user engagement and fostered a collaborative cooking community.

Robot Movement Automation with Computer Vision

- Designed a system using OpenCV and the SIFT algorithm for object tracking and target following within a Wi-Fi network. The project integrated Unity 3D with Vuforia SDK and Arduino IDE for motor control, enhancing automation in robotics.

Speech Recognition

- Created a MATLAB-based speaker recognition system using Fast Fourier Transform for feature extraction. This project aimed to identify speakers based on speech wave characteristics such as pitch, leveraging advanced signal processing techniques to enhance security and user authentication.

Certification Courses

The Web Developer Bootcamp 2024 January 2024
Colt Steele | Udemy

Introduction to DevOps January 2023
IBM | Coursera

Deep Learning Specialization December 2022
DeepLearning.AI | Coursera

Vue – The Complete Guide (inc. Router & Composition API) August 2022
Maximilian Schwarzmüller | Udemy

Machine Learning July 2021
Stanford Online | Coursera
