## Professional Summary

Dynamic and results-driven Software Developer with over a year of experience in agile environments, specialising in machine learning and web-based application. Proven track record of enhancing user experience and increasing engagement through innovative solutions. Skilled in object-oriented programming and passionate about computer vision. Adept at collaborating with cross-functional teams to deliver high-quality software solutions. Committed to leveraging technical expertise and proactive problem-solving skills to drive organisational success and innovation.

## Skills

|   |   |
|---|---|
| <b>Programming Languages:</b>             | JavaScript, TypeScript, jQuery, Python, Java, R, PHP, C, C#, C++                          |
| <b>Frameworks and Databases:</b>          | Vue.JS, React.JS, Node.JS, Magento, WordPress, Firebase, MongoDB, PostgreSQL              |
| <b>DevOps and Methodologies:</b>          | Git, Docker, Warden, Jira, Agile, Google Cloud Platform                                   |
| <b>Data Science and Machine Learning:</b> | Data Analysis, Feature Engineering, Predictive Modelling, Regression, TensorFlow, PyTorch |
| <b>Soft Skills:</b>                       | Communication, Adaptability, Problem-solving, Teamwork, Time Management                   |

## Work Experience

### Junior Magento Developer

*Reach Studios Ltd., Sheffield, United Kingdom*

- **Innovative Custom CMS Solutions:** Engineered and deployed bespoke CMS blocks for Corney & Barrow, enhancing site performance, usability, back-end management and addressing critical bugs to ensure smooth functionality.
- **Ongoing Checkout Optimisation:** Currently designing a custom one-step checkout layout, improving the user experience and increasing conversion efficiency.

### Junior Web Developer

*Net World Sports, Wrexham, United Kingdom*

July 2022 – June 2023

- **Optimised Front-End Development:** Built responsible and reusable Vue.JS front-end components, enhancing performance within a micro-service architecture and improving overall user experience.
- **Increased user engagement:** Revamped the company's blog website, resulting in a 40% increase in user engagement by implementing responsive design and collaborating closely with content and SEO teams.
- **Boosted Productivity:** Developed a Chrome Extension that integrated various APIs, leading to a 60% boost in departmental productivity by streamlining workflow.
- **Ensured High Code Quality:** Conducted code reviews, maintained comprehensive documentation, and adhered to best practices to ensure high code quality.
- **Migrated E-commerce store:** Employed agile methodology to migrate 40+ ecommerce stores from Magento 1 to Magento 2, resulting in a 30% reduction in page load times, an improved lighthouse score by 15%, and an enhanced customer experience.
- **Tools and Technologies:** JavaScript, PHP, jQuery, HTML, CSS, Vue.JS, Laravel, Node.JS, Magento 2, WordPress, Bootstrap, Sass, REST API, Elasticsearch, Docker, Git, Jira, Google Cloud Platform, PostgreSQL.

### Java Programmer (Internship)

*Racks & Rollers | Storage Technologies & Automation, Bengaluru, India*

January 2020 – July 2020

- **Developed Scalable Solutions:** Created a scalable Pick-to-light system GUI, enhancing operational efficiency and user experience.
- **Full Development Lifecycle:** Engaged in the complete software development lifecycle, from performance analysis and design to development and testing, ensuring optimal functionality and user satisfaction.
- **Improved Client Satisfaction:** Participated in client meetings to gather requirements and present progress updates, increasing client satisfaction and operational efficiency by 20%.
- **Enhanced Software Quality:** Leveraged Scrum and Test-Driven Development (TDD) methodologies to streamline the development process, ensuring high quality software delivery and reducing bug occurrence by 30%.

# Education

---

|   |                                |
|---|--------------------------------|
| <b>MSc. Advanced Computer Science (with Integrated Year in Industry)</b><br><i>Aberystwyth University, United Kingdom</i>           | September 2021 – December 2023 |
| <b>Bachelor of Engineering in Electronics and Communication Engineering</b><br><i>CMR Institute of Technology, Bengaluru, India</i> | August 2016 – August 2020      |

# Personal Projects

---

|   |
|---|
| <b>Prediction of Parking areas availability from parking dataset using AI/ML Models</b> <ul style="list-style-type: none"><li>Developed a system using Santander’s on-street sensor data and machine learning techniques (LSTM, Random Forest) to forecast parking availability with over 77% accuracy, enhancing urban mobility by providing reliable parking predictions.</li></ul>                               |
| <b>Prediction of likelihood of Blood-Brain Barrier (BBB) penetration for a chemical compound</b> <ul style="list-style-type: none"><li>Secured 1st place in a Kaggle competition by designing an SVM model with 90.603% accuracy to predict the likelihood of chemical compounds penetrating the blood-brain barrier. This model aids in accelerating drug discovery processes.</li></ul>                           |
| <b>Detecting Cardiac Arrhythmia using single led ECG recordings</b> <ul style="list-style-type: none"><li>Utilised PhysioNet's dataset to create a model for arrhythmia detection, achieving 82.947% accuracy through random forest and CNN models. This project contributed to improving the efficiency of arrhythmia diagnosis and patient monitoring.</li></ul>  |
| <b>Agile Software Development Project</b> <ul style="list-style-type: none"><li>Led an agile team as the product owner to develop a website that helps students cook healthy and easy recipes. The site provided nutritional values based on ingredients and allowed users to create and publish their own recipes. This project improved user engagement and fostered a collaborative cooking community.</li></ul> |
| <b>Robot Movement Automation with Computer Vision</b> <ul style="list-style-type: none"><li>Designed a system using OpenCV and the SIFT algorithm for object tracking and target following within a Wi-Fi network. The project integrated Unity 3D with Vuforia SDK and Arduino IDE for motor control, enhancing automation in robotics.</li></ul>  |
| <b>Speech Recognition</b> <ul style="list-style-type: none"><li>Created a MATLAB-based speaker recognition system using Fast Fourier Transform for feature extraction. This project aimed to identify speakers based on speech wave characteristics such as pitch, leveraging advanced signal processing techniques to enhance security and user authentication.</li></ul>  |
| <b>AR Solar System</b> <ul style="list-style-type: none"><li>Engineered an Android application that combined Unity 3D and Vuforia for Augmented Reality, allowing users to scan images and view an interactive solar system with detailed planetary information. This project aimed to enhance educational engagement through immersive learning experiences.</li></ul>   |

# Certification Courses

---

|  |               |
|--|---------------|
| <b>The Web Developer Bootcamp 2024</b><br><i>Colt Steele   Udemy</i>   | January 2024  |
| <b>Introduction to DevOps</b><br><i>IBM   Coursera</i>   | January 2023  |
| <b>Deep Learning Specialization</b><br><i>DeepLearning.AI   Coursera</i>                                       | December 2022 |
| <b>Vue – The Complete Guide (inc. Router &amp; Composition API)</b><br><i>Maximilian Schwarzmüller   Udemy</i> | August 2022   |
| <b>Machine Learning</b><br><i>Stanford Online   Coursera</i>   | July 2021     |
| <b>Introduction to C# Programming and Unity</b><br><i>University of Colorado   Coursera</i>                    | March 2021    |
